

Theme Editor

Emanuele Ricci, Ivan Litsvinenka, Simone Della Longa

Features

Base:

- Title and font customization
- Upload logo
- Custom background

Advanced:

- Custom CSS
- Custom decoration for each field
- Predefined themes
- Insert HTML snippets

Usage

Form creation:

- WF editor edits the structure and skeleton of the form
- Informations on the form are passed to the Theme Editor
- The theme is changed by the user with the features offered by the Theme Editor. Changes are displayed during the editing process. Custom CSS and HTML are validated using Security APIs
- At the end of the process the changes (CSS, Images, ...) are saved on the Filesystem/Database

Form visualization:

- Gui asks Theme Editor to apply a custom theme to the current form.
- Theme Editor accesses Storage to load the current form's theme informations.
- Theme Editor applies the theme to the form.

APIs

Needed API:

- **Storage:** storing on database themes informations (css, images, ...)
- **Security:** CSS and HTML validation

Needed/Offered API:

- **GUI:** retrieve data about the page currently being edited. Offer informations on the themes defined by the user

Offered API:

- **GUI:** informations on the themes: css, logos and images

RunTime Editor

The image displays the RunTime Editor interface. At the top, there is a dashed box labeled "FORM TITLE" with a pencil icon for editing. Below this, a form is shown with several fields: "Name" (text input), "Phone number" (text input), "Sex" (radio buttons for Male, Female, Yes), and "Additional Info" (text area). A checkbox at the bottom is labeled "I'll bring alcohol". A "TextField customization:" panel is open, showing options for "Border:", "Color:" (set to #b3b3b3), "Size:" (set to 1 px), and an "Apply to all" checkbox.

FORM TITLE

Name

Phone number

Sex

☒ Male

☐ Female

☐ Yes

Additional Info

☒ I'll bring alcohol

TextField customization:

Border:

Color: #b3b3b3

Size: 1 px

☒ Apply to all
