Detecting deadlocks using static analysis in .NET

Filip Navara

filip.navara@gmail.com

What did I do last week?

- Added source code to SVN at krizik.felk.cvut.cz
- Wrote a short paragraph on partial transfer functions

What do I plan to do next week?

- Get some coding done
  - Visualization of the data I've gathered so far
  - Test the implementation of the data-flow computation algorithm on the intraprocedural data (before it's adapted for interprocedural analysis in the following week/s)
