YALV! – Yet Another Log4Net Viewer

YALV! is a log viewer for Log4Net that allow to compare multiple logs file simultaneously.

FEATURES:

- Log files merging
- Dynamic filtering
- Dynamic show/hide log levels
- Save favorite log folders
- Open most recently used files
- Column sorting

CONFIGURATION:

Log4Net config file must be setup with XmlLayoutSchemaLog4j layout; just need a few lines in your application config file to configure it to use this format. See examples on below:

```
<log4net>
    <appender name="FileAppender" type="log4net.Appender.FileAppender">
        <file type="log4net.Util.PatternString" value="sample-log.xml"/>
        <appendToFile value="true"/>
        <layout type="log4net.Layout.XmlLayoutSchemaLog4j">
            <locationInfo value="true"/>
        </layout>
    </appender>
    <root>
        <level value="ALL" />
        <appender-ref ref="FileAppender" />
    </root>
</log4net
```

USAGE:

Download latest binaries, unzip and launch YALV.exe

TECHNICAL INFO:

It is a WPF Application based on .NET Framework 4.0 and written with C# language.
